Summary

Senior backend engineer with 5+ years building production AI, IoT, and event-driven systems with TypeScript, Node.js, and Go. Owned API architecture, distributed messaging, and data pipelines. Launched an AI backend serving approximately 100,000 users and independently delivered a Go/Pulsar pipeline processing 1M+ messages per hour across 300,000+ devices.

Technical Skills

Languages: TypeScript, Go, Python, Java, SQL
Backend: Hono, Node.js, REST APIs, gRPC
AI / LLM: Vercel AI SDK, Azure OpenAI, large language model (LLM) tool calling, Model Context Protocol (MCP)
Distributed Systems: Pulsar, Kafka, Kafka Streams, Debezium CDC, MQTT, asynchronous processing, event-driven architecture
Data & Platform: PostgreSQL, Redis, MongoDB, Docker, Amazon Web Services (AWS), Google Cloud Platform (GCP), OpenTelemetry, Sentry

Professional Experience

ThoughtSeed
Senior Full-Stack Developer | June 2025 - July 2026 | Bengaluru, India

- Led delivery across three engineers, managing priorities, estimates, task assignments, code reviews, mentoring, and releases.
- Owned architecture and delivery for HeyZack's production AI assistant; led two developers and launched its TypeScript/Hono backend, Go Pulsar consumer and processor, and Vercel AI SDK with Azure OpenAI in eight months for approximately 100,000 users.
- Designed GPT-5 mini tool-calling workflows for device control and optimization; achieved 3-5 second response times with production observability through Sentry.
- Shipped the Thaleos analytics platform in four months: a Go/Pulsar pipeline processing 1M+ messages per hour across 300,000+ devices and powering operational dashboards.
- Diagnosed a Pongo smart-lock access-code race condition within minutes, explained the root cause to the customer, and led a production fix within hours by removing pending jobs when access codes were deleted.

Factoreal Systems Private Limited
Senior Full-Stack Developer | September 2023 - June 2025 | Bengaluru, India

- Owned the Web Push service, Kafka setup, and marketing-engine UI; delivered Web Push end to end with operational scripts and CDN integration for a messaging platform serving 100,000+ users.
- Built asynchronous reporting services with TypeScript, Hono, REST, and Kafka.
- Redesigned Kafka partitions for parallelism and redundancy; added Kafka UI and event filtering, reducing database resource usage by 30% and improving reliability.

Ather Energy Private Limited
Application Developer | June 2022 - August 2023 | Bengaluru, India

- Built Java, Go, and JavaScript services for charger-data workflows and contributed to MQTT connectivity and the migration from GCP/AWS IoT Core to EMQX, improving nationwide platform reliability by 20%.
- Developed Kafka Streams and Debezium CDC pipelines, a notification engine serving 100,000+ users, and internal tools for controlled backend API access.

Protoezy Design Private Limited
Application Developer | October 2020 - May 2022 | Bengaluru, India

- Built TypeScript/Node.js order workflows with MongoDB and Prisma; automated PCB manufacturing through Gerber parsing, image processing, and CMS tooling.

Education

Mountain View | Bachelor of Computer Applications (BCA) | Graduated May 2020
Chikmagaluru, Karnataka
